SUMMARY

Backend-focused Computer Engineering student with a strong foundation in data structures and algorithms (500+ problems solved) and experience developing scalable backend systems and cloud applications. Built production-oriented AI pipelines with schema validation and performance optimization. Interested in system design, backend engineering, and high-performance distributed systems.

EDUCATION

B.E. in Computer Engineering SCTR's Pune Institute of Computer Technology, Pune <i>CGPA: 9.43</i>	2023 – 2027
HSC – Vidya Valley NorthPoint Jr College <i>Grade: 82%</i>	2023
SSC – Podar International School, Chinchwad (CBSE) <i>Grade: 98.60%</i>	2021

EXPERIENCE

AI Intern – Eklavya.me	Jan 2026 – Apr 2026
- Architected and deployed a multi-agent feedback system within a production AI pipeline for automated dataset synthesis and refinement. - Built a strict Pydantic-based validation layer to enforce schema adherence for non-deterministic LLM outputs, ensuring production-grade data integrity. - Improved robustness of live LLM workflows through structured validation, bounded refinement retries, and reliability-focused optimizations.	

PROJECTS

AI Educational Content Pipeline	[GitHub] [Live]
- Built a multi-agent AI pipeline for structured educational content generation, processing 500+ content runs with schema validation and quantitative review scoring. - Reduced malformed LLM outputs by 60% using strict Pydantic validation and bounded refinement retries for improved reliability. - Exposed REST APIs and persisted run history in PostgreSQL; deployed on cloud (Vercel) with Groq LLM integration.	
Shortify – Custom URL Shortener	[GitHub] [Live]
- Built a scalable URL shortener (Node.js, Express, MongoDB) with JWT authentication and secure REST APIs. - Reduced URL length by 90% and handled 1000+ req/min under 150 ms through optimized database indexing and efficient routing.	

TECHNICAL SKILLS

Languages: C, C++, Python, Java, JavaScript
Problem Solving: LeetCode (360+), CodeChef (2*), 500+ cumulative DSA problems
Tools: Git, Linux
Backend: Node.js, Express.js, REST APIs
Databases: MongoDB, MySQL, AWS RDS, DynamoDB
Cloud: AWS (EC2, S3, Lambda, VPC, IAM)
